

Positionality

A1b. Peer Evaluation 1

Open studio

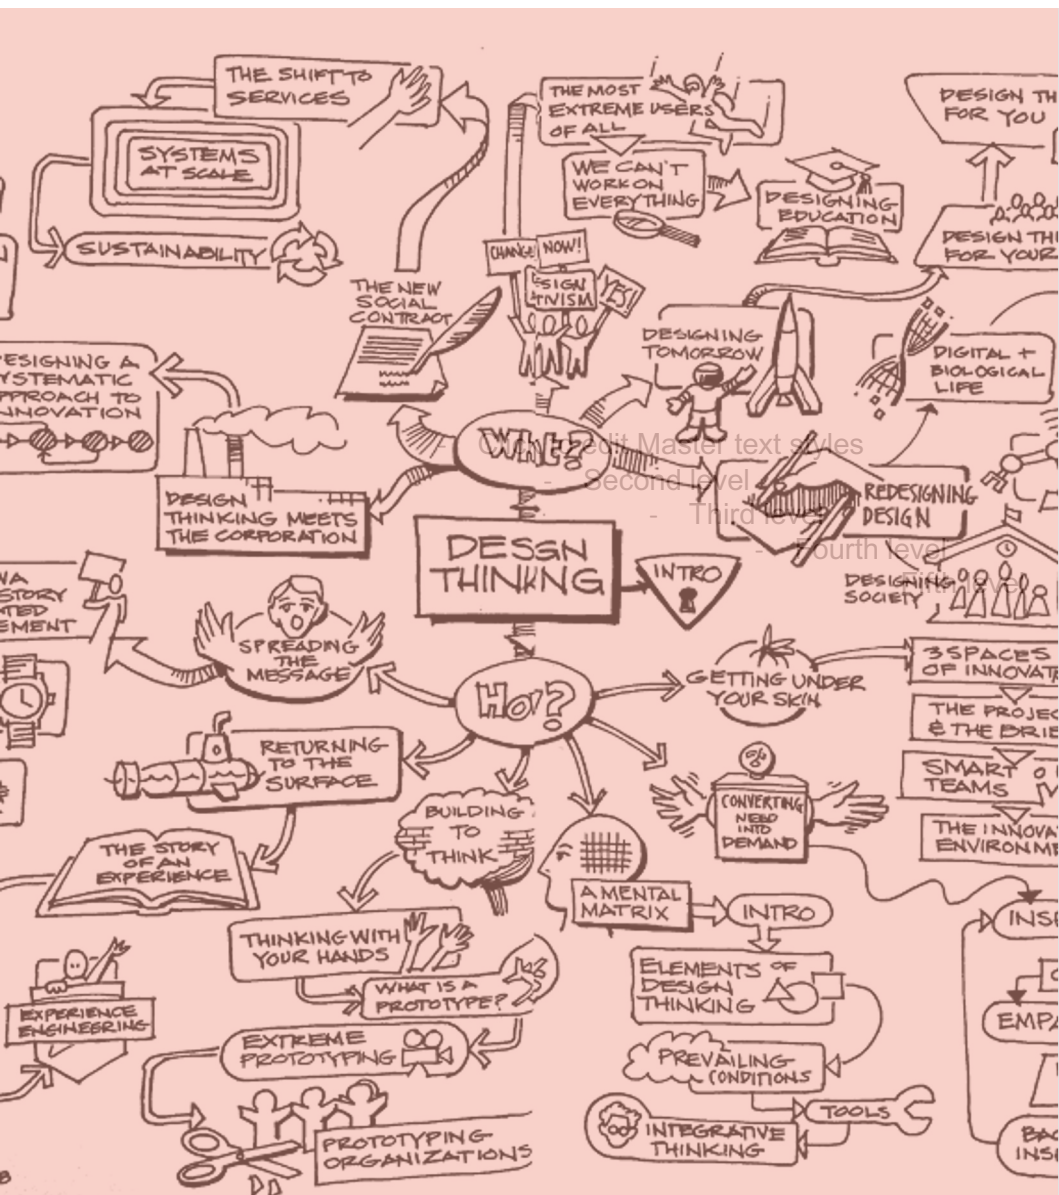

THE UNIVERSITY OF
SYDNEY

We recognise and pay respect to the Elders and communities - past and present - of the lands upon which this University of Sydney campus sits. Indigenous knowledge has been generated and shared for thousands of years, underpinned by a strong connection to land, sea and culture.

We seek to continue to exchange knowledge and build connections upon these traditions.

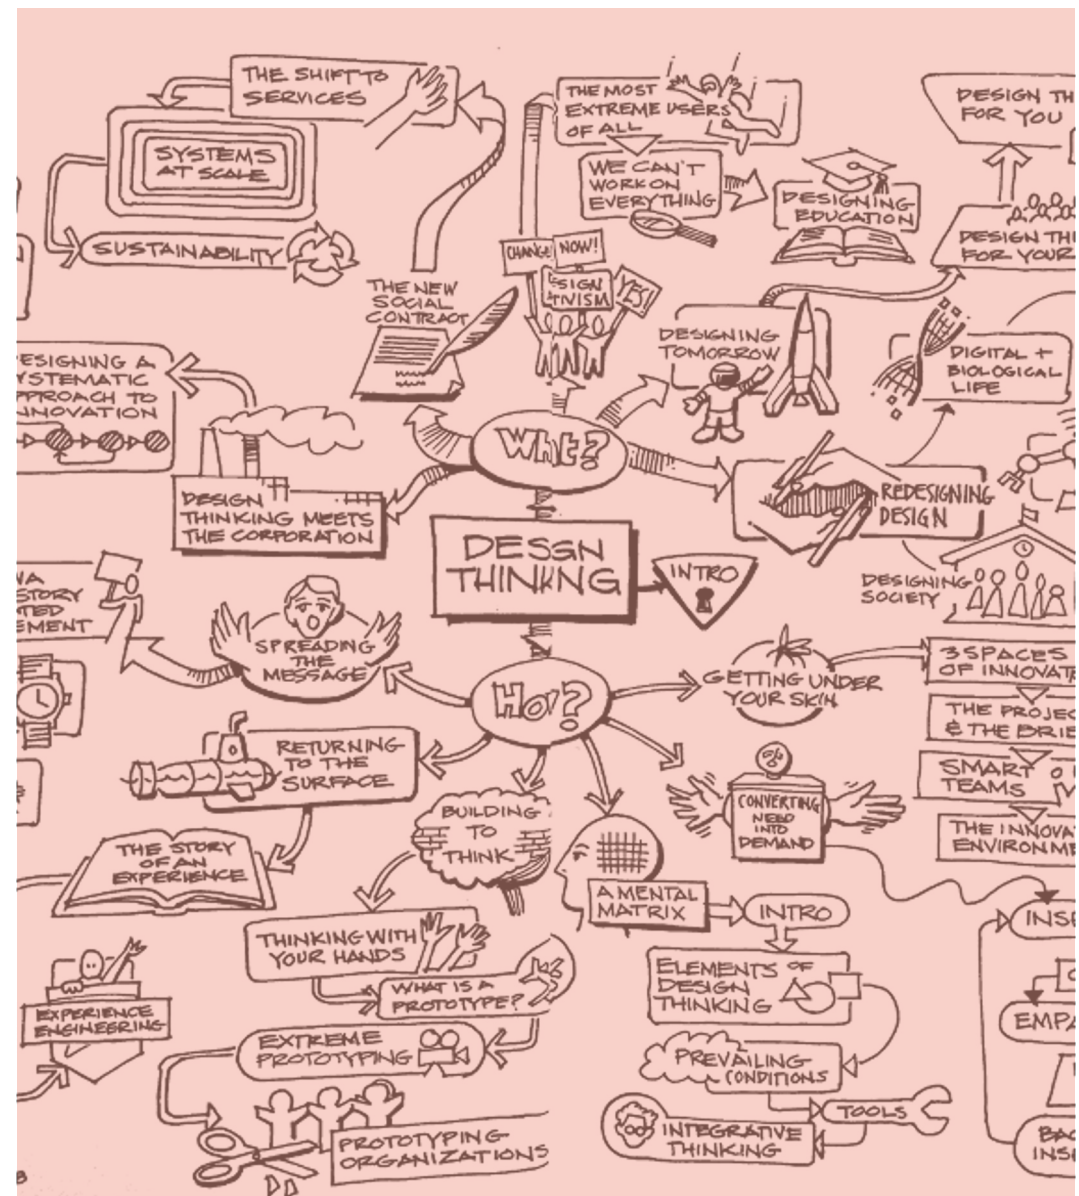

Tutorial Aim

In this tutorial students will:

- consider and visualise their positionality
- complete A1b.
- participate in an open studio for formative feedback and finalising A3. Context exploration and mapping

- **Positionality**
- A1b. Peer Evaluation 1
- Open studio
- Wrap Up

What is positionality?

Positionality means being aware of our own background—like culture, beliefs and experiences, and how these can shape the way we see the world.

In design, positionality helps us understand that our ideas are influenced by our personal biases.

What are values

Values are a complex set of reasons, feelings and beliefs that determine how we view the world. These values help us to create an **opinion** of something. For example, we think in a particular way.

Once we feel confident that we've made a considered decision or come to a sensible conclusion, this opinion evolves into a **judgement**.

These judgements become the framework we use to live by, enabling us to **critique** our choices and make informed decisions.

Understanding values

Each of these elements (opinion, judgement and critique) are core to design theory, research and practice.

Especially when we are designing for others, we want to better understand our personal values as **they inform and influence our decision making.**

Value making

Value-making happens when we adopt a **standpoint or position** from which to view new knowledge, and where we make connections between experiences and past knowledge.

How we interpret ways of thinking (theoretical, philosophical and cultural) is dependent on our **assumptions, expectations and interests**, combined with our **personal experiences** of value.

In the following activity, we will explore what we understand as values and begin to **understand our own positionality**.

Creating a Values Cartouche

A cartouche is an ancient Egyptian method of sharing a name or a story using hieroglyphics.

Today we're going to create our own individual value cartouche as a way of exploring our own value systems.

Vest, Nancy. [jmo0528.jpg](#), June 2008. Pics4Learning.

Activity (10 mins)

Step 1: Working individually on Figma, read through the values icons and identify 6 values that best represent you.

Consider:

- What is important to you?
- What did you leave out and why?
- Which of the values do you most identify with?

Step 2: Write your name on a Values Cartouche and assemble your values.

If you can't find the values that best represent you, draw, write or import your own values.

Step 3: Identify commonalities and differences with your project group team members. Discuss.

Discussion: Tutorial group (5 mins)

Be prepared to share your thoughts on and discuss the following question:

What can our Values Cartouches and positionality tell us about how we practice design?

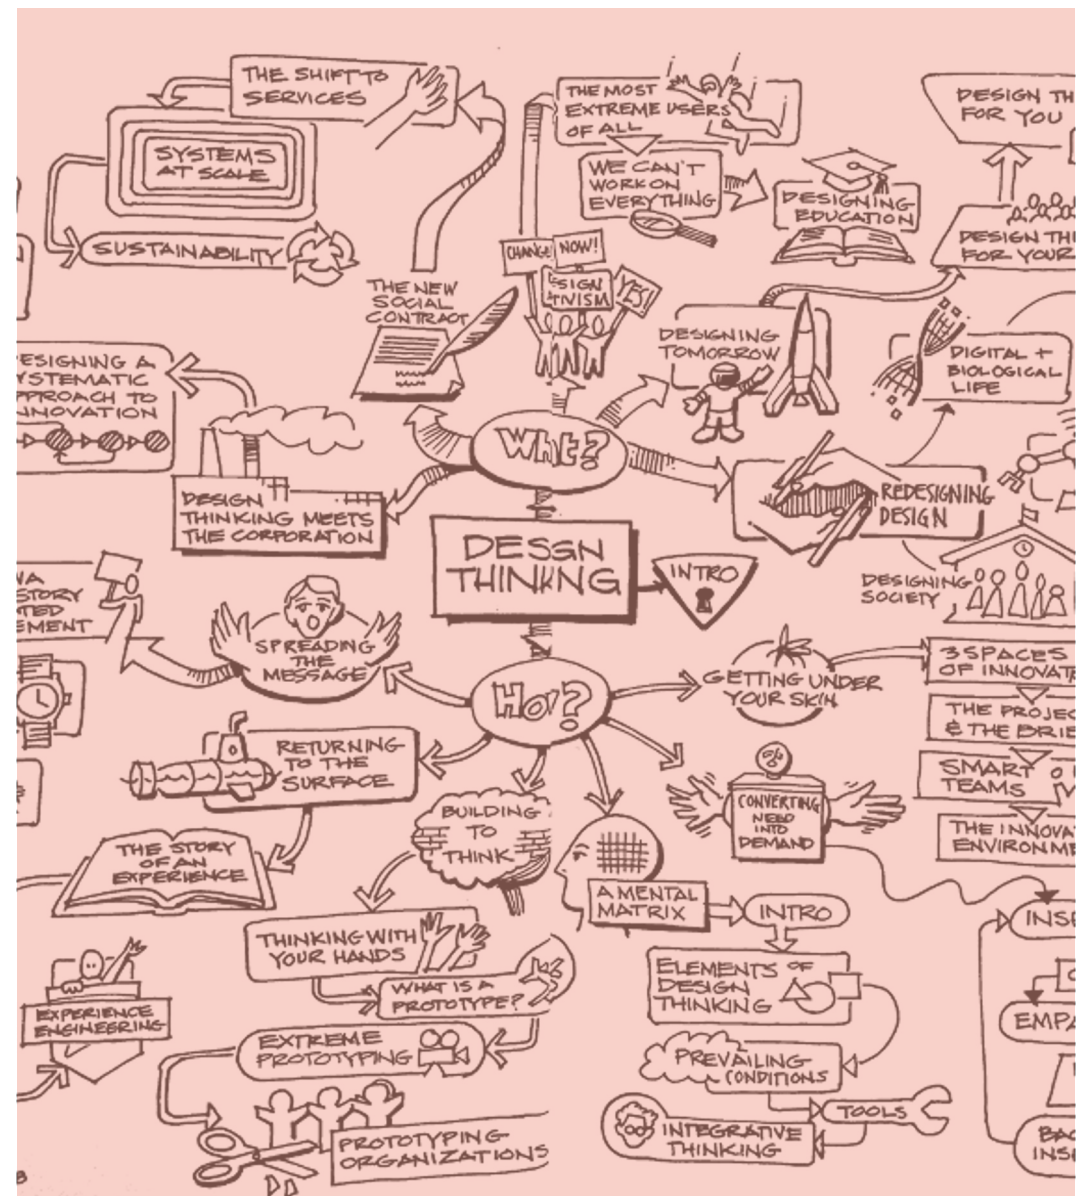

Discussion: Tutorial group (5 mins)

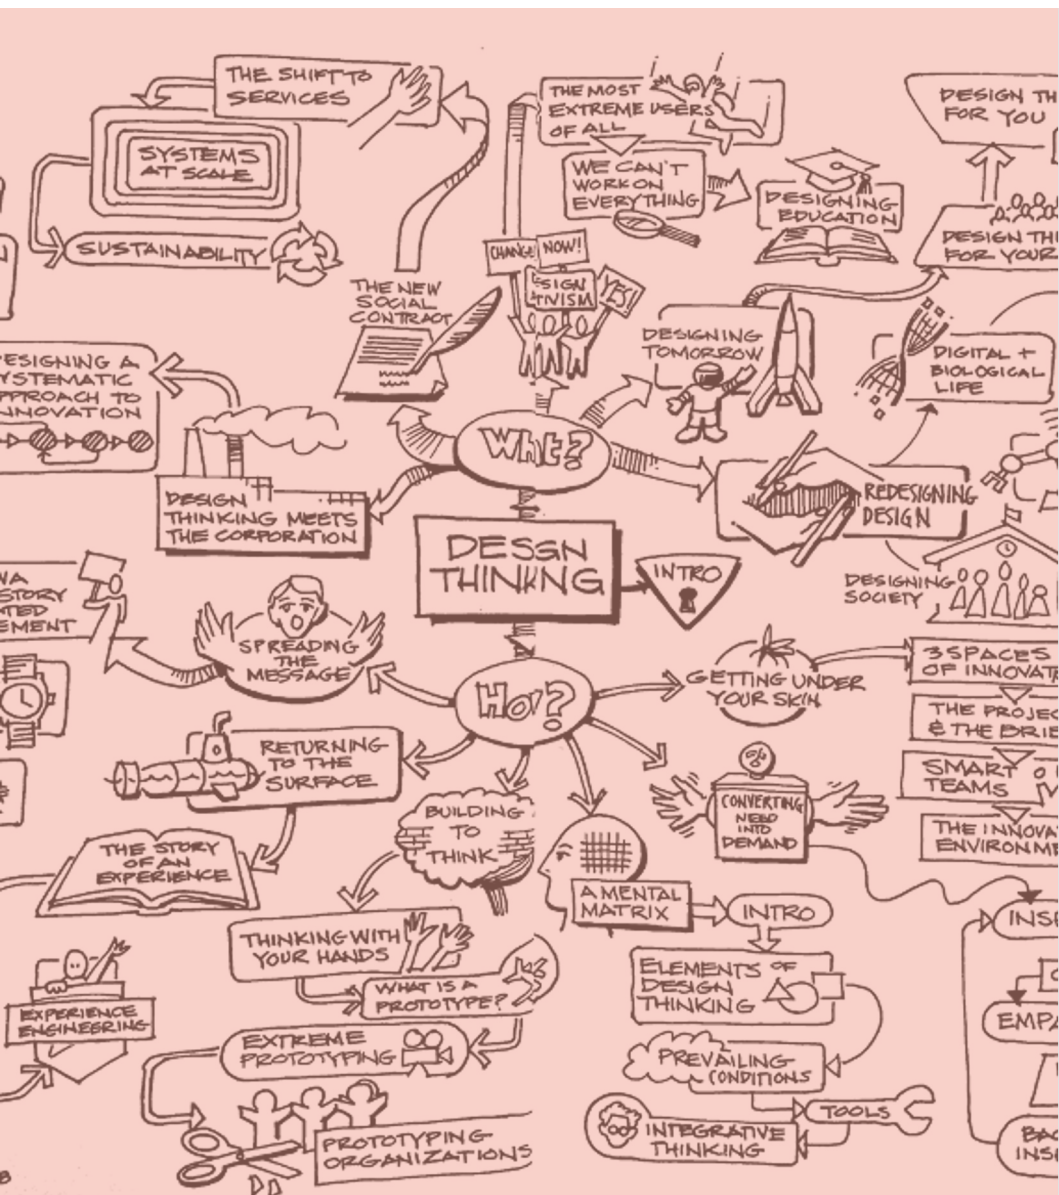

Be prepared to share your thoughts on and discuss the following question:

What can our Values Cartouches and positionality tell us about how we practice design?

Our values cartouche are a **simple representation** of our positionality. They are also a great indicator of how diverse our cohort is. We can use this knowledge to think about our own positionality and reflect on the **implications our positionality might have** on the why, what, when, where and how we design.

A1b. Peer evaluation 1

15 min to complete the online task in the assignment's page on canvas

Please be aware, your project group members will receive your evaluation and written feedback

- Positionality

- Open studio
- Wrap Up

Open studio

The aim of this open studio is for:

- working on the A3. submission
- clarification of the assessment requirements
- formative feedback on the progress of your A3. submission

Progress recommendations

By today, we recommend you have already:

- Conducted a pilot interview to test your interview questions
- Reflected on the pilot interview (see Week 3 Figma reflection)
- Iterated the interview questions, if more appropriate data is needed
- Supported your team members to conduct their pilot interviews

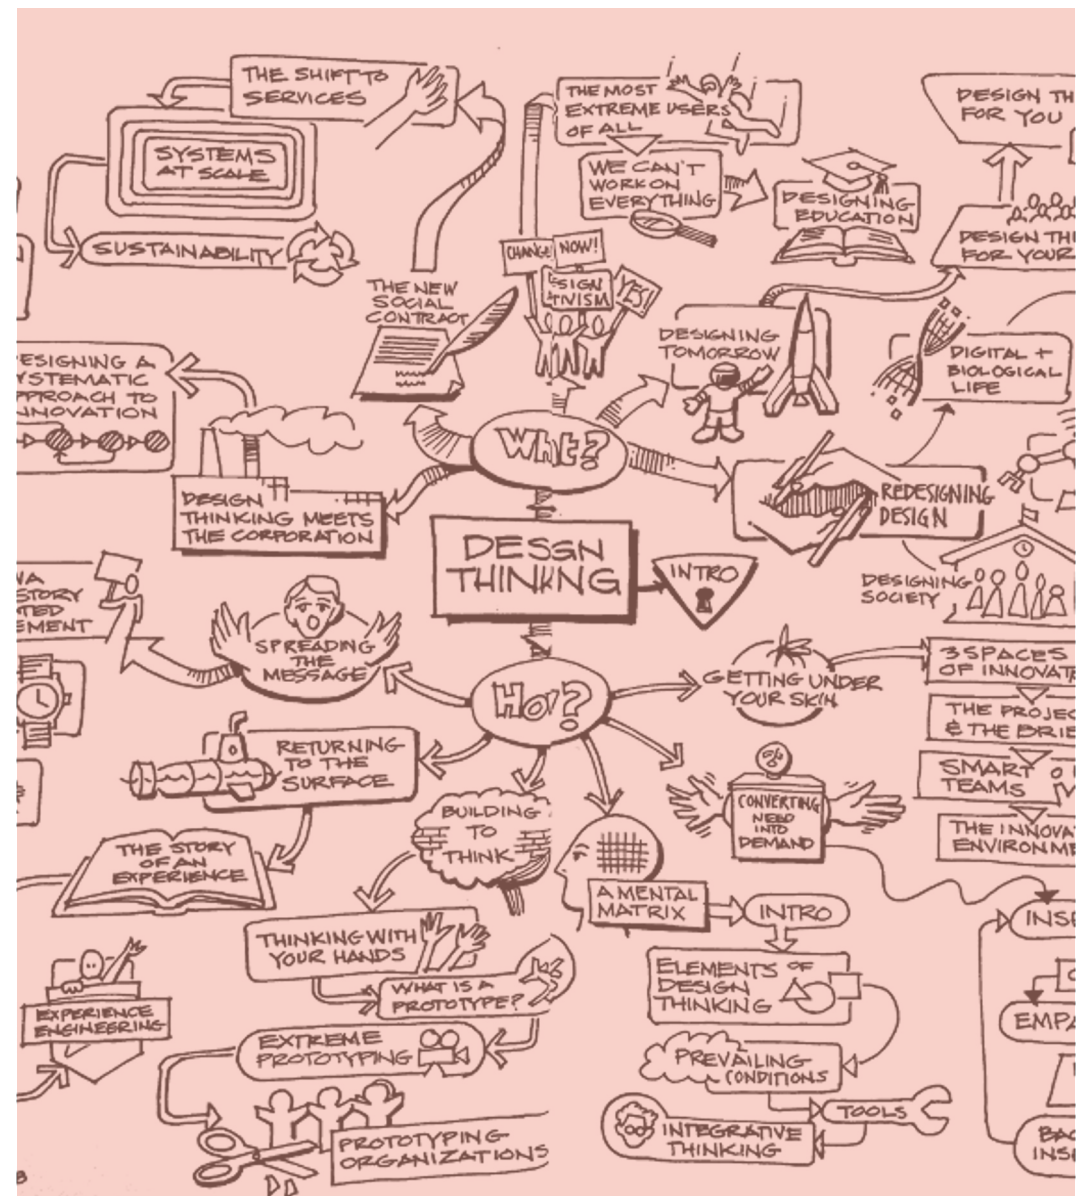

If you have not completed these tasks, please complete them during the remainder of today's tutorial.

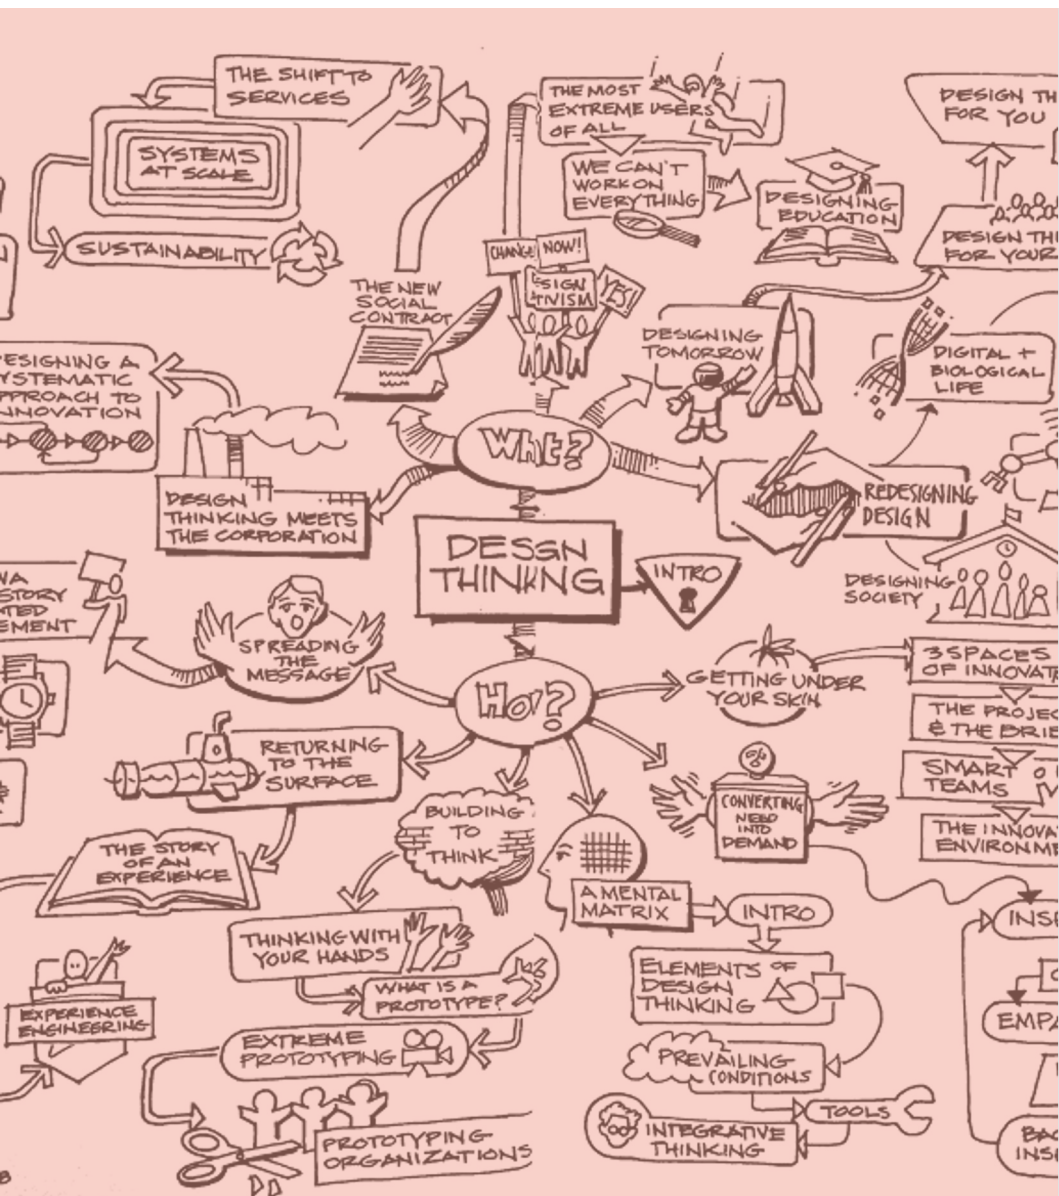

Needing assistance with A3.?

- Sketch-noting (see Week 2 lecture, slides and canvas module)
- Stakeholder and/or power map (see Week 2 Figma activity and canvas module)
- Research plan (see Week 3 Figma activity)
- Writing and refining open-ended interview questions (see Week 3 lecture recording, slides and canvas module)
- Conducting an interview (see Week 3 lecture, slides and canvas module)

- Positionality
- A1b. Peer Evaluation 1
- Open studio
- **Wrap Up**

Wrap Up

- Complete and submit A3 by Friday at 23:59.
- Meet with your project groups to discuss your individual research and potential topic for the semester-long project
- Read the Week 5 module & complete the pre-work
- Buy and bring a stack of yellow post-it notes (45 sheets min)

SEE YOU NEXT WEEK!
